FILLER-BREATHERS FOR RESERVOIRS

Filler-Breathers provide filler ports for hydraulic power units, mobile equipment, and other liquid reservoirs. Liquids are strained as they are added to the tank and it also lets the tank breathe filtered air. The 30 mesh filler screen removes dirt and debris from liquids as they enter the systems. The breather cap filters the air, trapping airborne dirt down to 40 or 10 micron levels. It permits air passage at up to 25 scfm.

Many additional options are available, such as:

- 3", 6", 8", or 13" baskets
- Perforated inner guards to protect the stainless steel mesh of the basket
- Post magnets attach to the bottom of the basket to remove the ferrous particles that can sift through the screen
- Padlock adapted to help prevent tampering
- All stainless steel units
- Units with a 3" hi neck
- Dipsticks in different lengths
- All nylon units
- Pressurized units

LONGWALL USA 2009 EXHIBITION & CONFERENCE

This is North America's most important coal mining exhibition. It will be in Pittsburg, PA, June 16-18, 2009, at the David L. Lawrence Convention Center. There is no other show like Longwall USA.

Well established and attended by a range of delegates from all parts of the longwall mining industry, Longwall USA attracts all of the most important manufacturers and service providers. Click on the link that follows and go right to the Longwall USA 2009 web site for more information.

Make sure you make plans to attend this most important mining industry trade show. You won't want to miss it.

BASKET STRAINERS, BAG FILTERS, CARTRIDGE FILTERS

If you have a filtration application that requires the capacity of up to 2,500 gpm you may want to consider our bag filters, basket strainers, or cartridge filter housings. There are virtually so many options involved, ie: housing material, filtration device configuration, pipe sizes, seal material, housing size, and other options. Whether you need filter cartridges, filter bags, or just plain strainer baskets, we have the unit for you. From a single bag filter or strainer basket shown to the left, or a multiple cartridge filter unit shown to the right with the flow direction visual, there are many options.

Don't hesitate to contact us. Let's take a look at your application together. Talk to one of filter specialists today.

TEST YOUR MINING KNOWLEDGE II

We received such a good response from last month's quiz that we are continuing it this month. These questions were taken from www.gotoquiz.com. Have fun!

1. What is the cheapest way of mining?
 - Open-pit mining
 - Drift mining
 - Shaft mining
 - Strip mining
 - None of the above
2. Shaft mining is chosen when the rock or mineral is too far to reach using surface mining such as open-pit mining. True or False.
3. Borehole mining is a form of surface mining. True or False.
4. Underground mining, like continuous mining, tends to be less technologically sophisticated because of the dangers and expense of subsurface tunneling. True or False.
5. Mining colleges have very low enrollment. True or False.
6. Which minerals are not mined in the United States?
 - Coal and lead
 - Oil and iron ore
 - Tin and asbestos
 - Molybdenum and gold
 - Manganese and silver

ANSWERS: 1) Open-pit mining; 2) True; 3) True; 4) False; 5) True; 6) Tin and asbestos
