THREE APPROACHES TO MAINTENANCE

1. **REACTIVE.** Crisis management philosophy that consists of emergency breakdown maintenance.
2. **PREVENTIVE.** Philosophy of change it whether you need to or not in hopes of precluding a failure.
3. **PROACTIVE.** Uses a combination of careful design, fluid analysis, and condition monitoring to track system health. This allows maintenance planners to get maximum useful life from a component.

!!Number 3 is the most cost efficient!!

WHICH APPROACH DO YOU TAKE?

MINING NEWS FROM CANADA

We are all in this together, so it is important to keep up with current events of what is happening on the mining scene in our northern neighbor, Canada. Click on the link below to view the *Canadian Mining News On-Line*.

[Canadian Mining News On-Line](#)

It is important that those of us involved with products, services, information, are employed in, or whose lively hood depends on the mining industry, be knowledgeable as to what is occurring in this industry. Canada is just one piece of the puzzle. More on another regional area next month. Stay tuned.

PIPE MOUNTED SUCTION SCREENS

Suction screens are used for straining oil, chemical liquids, and water. They will not rust. They are made of glass reinforced nylon with stainless steel wire cloth sonically embedded through heat and vibration. No epoxy is used. We also have all stainless steel suction screens. Those with the nylon connector ends are available in male and female pipe threads up to 3" npt. Mesh sizes are from 4 mesh to as fine as 200 mesh (74 micron). The 60 mesh (238 micron) and finer are backed up with a 30 mesh stainless steel wire cloth for strength.

These are ideal for minor cleanups to protect the pump from damage. They are low cost and in stock.

SPIN-ON REPLACEMENT ELEMENTS

Flow Ezy has replacement spin-on elements that interchange to most major manufacturers. Available from 3 micron to 100 mesh with pipe sizes from 1/4" to 1 1/2" npt. They are mostly used for return line applications.

We interchange other manufacturer's elements such as Am-bac, Can Flo, Cim-Tek, Donaldson, Fram, Gresen, Hastings, Hycon, LHA, Luberfiner, Pall, Parker, PTI, Vickers, Wix, Zinga, and others.
