MOTORCYCLE OIL FILTERS

For all those folks with motorcycles and other recreational vehicles, Flow Ezy carries oil filters. We have interchanges for many motorcycles, ATVs, jet skis, go-karts, boats, and other vehicles. Standard cellulose paper is not used in our filters. Our filters use a synthetically enhanced micro-glass for longer service and better efficiency. The technology that has gone into our oil filtration products will stand the test against any competitor's

products. All Flow Ezy motorcycle filters have correct pressure relief valving and flow rates in accordance with the original manufacturer's specifications.

FLOW EZY INTERCHANGES PALL FILTERS

Flow Ezy has been supplying PALL replacement elements for many years. The media used in our PALL replacement elements is micro-glass impregnated with resin, supported upstream and downstream with polymer mesh. If you are looking for PALL filters, call us first instead of last. You won't have to make any other calls after talking to us.

If you need our complete Filter Element Crossover Catalog CC-2, give us a call and we'll get one out to you. We can interchange over 23,000 other manufacturer's filters. You can view the complete list by clicking on the link below.

OEM MOBILE HEAVY EQUIPMENT FILTERS

Flow Ezy has an extensive listing of replacement filters for large OEM heavy equipment. Give us a call to see if we can help in your quest for additional business. We cross filters for:

- Allis Chalmers
- Caterpillar
- Daewoo
- Champion Road Machinery
- Clark
- Euclid-Hitachi
- Ingersoll Rand
- J.I. Case
- John Deere
- Nacco
- Terex
- Yale
- Hyster
- Mitsubishi
- New Holland
- and many others

RESERVOIR FILLER-BREATHERS

These filler-breathers provide filter ports for hydraulic power unit tanks or other liquid reservoirs. Liquids are strained as they are added to the tank. It also lets the tank breathe filtered air. The 30 mesh filler basket removes dirt and debris from liquids as they are introduced to the system. The breather cap filters the air, trapping airborne dirt down to 40 or 10 micron levels. It permits air passage at up to 25

scfm. Mounting hardware, gaskets, and templates are supplied. There are many options, such as, dipsticks, hi necks, lock lugs, inner guard, magnet posts, side mounted units, removable basket units, all nylon units, pressurized units, and all stainless steel units.

HYDRAULIC MACHINES QUIZ

The basic idea behind any hydraulic system is very simple. Force that is applied at one point is transmitted to another point using _____.

1) a compressible fluid; 2) an incompressible fluid; 3) a cold compress

It's important for a hydraulic system to contain what?

1) air bubbles; 2) no air bubbles; 3) compressible fluid

Where can you look in your car to see a good example of a piston-driven hydraulic system?

1) the power steering system; 2) the instrument panel; 3) the brake system

Large hydraulic machines usually have these to hold the difference in the volume of oil displaced by the two sides of the cylinder.

1) large diameter lines; 2) external reservoirs; 3) men with buckets

It's not uncommon for a large hydraulic machine (one with 6 or 8 large hydraulic cylinders, for example), to require how much hydraulic fluid?

1) 100 gallons; 2) 10 gallons; 3) 1 gallon.
