All of our products are
MADE IN THE USA!

PORTABLE FILTRATION UNIT

Do you ever have to go into the field or another part of the plant to service equipment to solve a possible contamination issue? Not enough room to maneuver a filter cart? Try our "Drum Topper" portable filtration unit. It is small enough to carry (weighs less than 60 lbs), has a handle, and fits right on top of a 55 gallon drum. You can also take it to the site, hook the hoses up, plug it into a 115 or 230 VAC or pneumatic connection, and recirculate the system fluid, keeping the fluid cleanliness level in check. With dual stage filtration you can ensure optimal fluid cleanliness.

For a small investment, this compact unit will reduce system downtime, repair costs, prevent excess machine wear, and other contamination related problems. This is a customized unit that can be made to fit your exact specifications. It allows for easy storage and maintenance, as well. For more information go to our web site and visit this item at the following link.

PLEATED BAG FILTER CARTRIDGES FOR BAG FILTER HOUSINGS

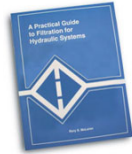

Flow Ezy's pleated bag cartridges give up to 12 times the filtration that standard sock-type filter bags do. For example, the standard size 2 sock-type filter bag has 4.4 sq. ft. of filtering area. The size 2 pleated cartridge has 25 sq. ft. of filtering area. The usage of the pleated cartridges minimizes downtime, increases filtration efficiency, and has a high dirt holding capacity. We can interchange virtually all sizes. The seams are sonically welded to prevent leakage and prevent any by-pass flow of contamination. Give Flow Ezy a call, fax, or e-mail to find out more about the efficiency ratings, availability, and pricing of our pleated cartridges for bag filter housings. To view our flyer on this product, visit the link below on our web site.
