All of our products are MADE IN THE USA!

FILTRATION SOLUTIONS FOR OIL, AIR, CHEMICAL, AND FUEL APPLICATIONS

Are pictures worth a thousand words? Maybe, maybe not. We can tell you that Flow Ezy has a filtration solution for your application. That is why we always ask the question, "Got Filter?"

NEW PRODUCT LAUNCH IN OUR MOTORSPORT LINE

The most popular filter in our Motorsport line, the 9ILA, just got better! **We increased the filtering area 33%.** We still offer the 9ILA, but are introducing our new 16ILA! It has the same connections, AN-10 (5/8" tube) and AN-12 (3/4" tube). We only lengthened the body to accept an element with 60 sq. in. Yes, that is correct, 60 sq. in! The 9ILA offers a filter element with 40 sq. in. The 16ILA is offered in the same HOT Flow Ezy colors of either anodized aluminum, bright polished red, blue, or black. Whether your application is oil or fuel, the new 16ILA will serve your needs with a flow capacity of up to 18 gpm.

If you don't have our Motorsport Filter Catalog FEM-1, contact us and ask for your copy. We will be glad to send it to you. You can also go to our [Flow Ezy web site](http://www.flowezyfilters.com), click on the catalog link, and download your copy immediately.

ETHANOL PRODUCTION FILTRATION SOLUTIONS

Ethanol production has remained steady. It appears that the EPA is projecting that the US will produce approximately 36 billion gallons of renewable fuel by 2022. Today the US produces just over 10 billion gallons of ethanol.

Our ethanol production filtration solutions take a back seat to no one. Whether your application is seal water filtration, water treatment and iron recovery, cooling tower filter/separator, load out filtration, large or small, we have the units that will help. It doesn't matter what step of ethanol production you are at, we have a filter that can aid in your production. Please click on the link that follows to download our new brochure.

CUSTOM MANUFACTURING CAPABILITIES

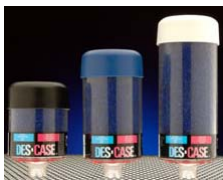

Do you realize the capabilities Flow Ezy has? In addition to our standard product line, we have the capability to make most configurations and types of filters. On either side you see an assortment of what we have done in past years and some of which is currently in our product line. If you have an application that

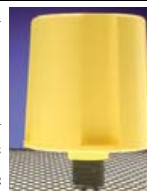

requires a custom filter, give us a try. We most likely will be able to help. If you need 1, 100, 250, or more, Flow Ezy should be your first contact.

THE TWO MOST DAMAGING TYPES OF CONTAMINATION

Flow Ezy has always understood the importance of fluid cleanliness. That is why

we are in the filter business. We realize the two most damaging types of contamination are water AND particulate. Where does most of the moisture enter the system? Through the tank breather. It is necessary to filter the air entering the system through a breather to maintain proper air pressure balance within the tank. Standard tank breathers filter only particle contamination. What about the moisture? That is why you need a

"Desiccant Tank Breather" like the ones shown here. Try our Triple Play unit which not only removes water and particulate, but also coalesces oil mist.

Our comprehensive line of particulate and water control products are used in many applications, some of which are gearboxes, reservoirs, and storage/process tanks. To find out more, give us a call or send us an e-mail.
